Two certifications, one interoperable ecosystem of devices

The Internet of Things (IoT) is predicted to reach 27 billion devices by 2025. Maintaining interoperability between these devices requires certification based on common standards. Together, Wi-Fi CERTIFIED™ and Matter ensure that IoT devices meet high standards for a seamlessly connected, interoperable home or workspace. When paired together, Wi-Fi CERTIFIED and Matter allow users to choose from a wide range of brands that bring an elevated level of simplicity, interoperability, reliability, and security to the IoT market.

Proven, widely deployed Wi-Fi CERTIFIED™

Wi-Fi’s wide-ranging capabilities and pervasive global connectivity make it uniquely suited to support IoT products, applications, and use cases and make it a proven, widely deployed technology that is leveraged by Matter. Wi-Fi certification supports lower return rates, higher customer satisfaction, and increased sales volume, and Wi-Fi CERTIFIED gives consumers confidence that their product will deliver a positive, WPA3™ secure user experience. Wi-Fi Alliance® members can certify products and leverage the globally recognized Wi-Fi CERTIFIED logos and brand. Available certifications include core Wi-Fi functionality, such as Wi-Fi CERTIFIED 6™, as well as more specialized IoT functionality, such as Wi-Fi CERTIFIED HaLow™, for low-power, long-range connectivity, and Wi-Fi CERTIFIED Easy Connect™, which allows users to connect devices with QR codes and other low-touch connectivity formats — and many more.

Open and industry-driven Matter

Matter is a unified standard to connect compatible smart devices and ecosystems with one another. Purchasing a Matter product imparts confidence in consumers because their devices work reliably together and are based on proven technologies, like Wi-Fi. Consumers love Matter because it takes the guesswork out of the purchasing process when trying to connect multiple devices. Major smart home ecosystems and device brands will support Matter on numerous devices already in millions of homes. Developers love Matter because it makes future roadmaps simpler, allowing developers to create products that work with any ecosystem using a single local protocol. Retailers love Matter because it is the mark of category growth, a simple purchasing process, better consumer experiences, and lower training and operational costs.

Matter leverages Wi-Fi to deliver strong IoT advantage

Matter leverages inherent strengths of Wi-Fi to deliver interoperability between devices using a common application layer and data model, allowing devices to communicate across multiple IP network technologies. Wi-Fi is uniquely suited to support IoT products and applications with its wide-ranging capabilities and proliferation as a global standard. Matter over Wi-Fi benefits from these Wi-Fi CERTIFIED competencies while connecting over 18 billion installed Wi-Fi devices.¹

- **Standards-based, interoperable technology:** A wide range of device manufacturers and common Wi-Fi standards deliver a growing range of IoT applications that vary in performance, power, and latency requirements
- **Pervasive connectivity:** Seamless control of IoT devices through smartphones and tablets connected to 18 billion Wi-Fi devices in use
- **Proven WPA3™ security:** Proven WPA3™ security to protect information exchanged in personal and enterprise environments
- **Cost effective, simple deployment:** An easy-to-deploy and cost-effective foundation that requires no separate gateways or specialized skills to deliver IoT applications
- **Backward compatibility:** Stands the test of time, minimizing risk of premature obsolescence and ensuring legacy devices can easily connect
- **Location awareness:** Wi-Fi Location™ delivers sub-meter-level location information that allows a range of location-aware IoT services for industrial and smart city environments, such as asset management, network management, and geo-fencing
- **Reliable, sophisticated connectivity:** Wi-Fi 6 and Wi-Fi 6E networks deliver sophisticated network efficiency, diagnostics, management, and optimization capabilities, allowing devices such as manufacturing robots and drones to remain connected even as they move or “roam” throughout home or industrial networks
- **Flexible network topology:** In addition to a traditional Wi-Fi connection through access points, Wi-Fi CERTIFIED EasyMesh™, Wi-Fi CERTIFIED Wi-Fi Aware™, and Wi-Fi CERTIFIED Wi-Fi Direct® offer a variety of network topologies to different IoT environments for scalable and customizable options

Wi-Fi CERTIFIED: Technology to trust

Since 2000, Wi-Fi Alliance has been driving the adoption and evolution of Wi-Fi through the Wi-Fi CERTIFIED program. The Wi-Fi CERTIFIED logo designates products with proven interoperability, backward compatibility, and the highest industry-standard security protections in place. Wi-Fi CERTIFIED devices can communicate with previous and future generations of Wi-Fi technologies, enabling a seamless, interoperable experience with a multitude of other Wi-Fi devices for years to come. www.wi-fi.org/certification

Matter certification

This industry-unifying standard delivers reliable, secure connectivity, and is a seal of approval that devices will work seamlessly together, today and tomorrow. Matter is creating more connections between more objects, simplifying development for manufacturers and increasing compatibility for consumers. buildwithmatter.com
